Melisa YALÇINKAYA

Junior Software Engineer

Erzurum, Türkiye | melisa.yky2001@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

Junior software engineer, graduated in Software Engineering from Atatürk University in 2026. Builds end-to-end web applications with Django, Django REST Framework and React, and machine learning and natural language processing models with Python. Owned API design, security, automated testing (CI) and Docker deployment for QR menu and QR attendance systems that run as live demos. Co-authored a conference paper on fake news detection with a classifier reaching 99.24% accuracy.

WORK EXPERIENCE

Intern 07/2025 – 09/2025

Berk Yazılım / Barkodcu *Erzurum, Türkiye*

- At a company building restaurant automation and barcode solutions, worked on the full-stack development of the "QR Menu" application.
- Built web-based customer interfaces, backend API services and desktop management tools that digitalised customer-facing operations.

EDUCATION

BSc, Software Engineering 2022 – 2026

Atatürk University *Erzurum, Türkiye*

- Graduated. Transferred from Gümüşhane University based on GPA and completed the final three years here.

BSc, Software Engineering 2021 – 2022

Gümüşhane University *Gümüşhane, Türkiye*

- Completed the first year of the degree.

SKILLS

Programming Languages: Python, JavaScript, HTML5, CSS

Data Science & AI: Machine Learning, Natural Language Processing (NLP), Deep Learning, TensorFlow.js

Web Development: Django, Django REST Framework, React.js, RESTful APIs, JWT

Tools: Git, GitHub, GitHub Actions (CI), Docker, pytest, PySide6 / PyQt5, Figma, Unity, Claude

PROJECTS

QR Menu

Technologies: Django REST Framework, React.js, Docker, PySide6

- Built a digital menu and owner panel for restaurants, opened from table-specific QR codes, with waiter calls and bill requests, filters for 14 allergen groups, Turkish/English content and three menu themes.
- Secured the API with JWT authentication, ownership-based authorisation and rate limits; 90+ automated tests and GitHub Actions CI enforce a 90% coverage floor.
- Built a PySide6 desktop call screen on the same API, released automatically as a Windows .exe. Live demo: qr-menus.onrender.com

QR Code Attendance System

Technologies: Django, Python, SQLite, Docker

- Built a cheat-resistant attendance system with QR codes that refresh every 5 seconds and expire within 15, an optional location check and one check-in per device.
- Added a live attendance list, Excel export and attendance statistics. Live demo: qr-yoklama-e9u9.onrender.com

LockNet

Technologies: JavaScript, TensorFlow.js, NLP, Chrome Extensions API

- Built a privacy-first Chrome extension that detects and censors toxic text on web pages in real time using NLP.
- The model runs offline in the browser, so no page content is sent to an external server.

ATASENG Club Website

Technologies: React.js, Figma

- Created a modern, user-experience-focused web platform for a student club.
- Turned interface designs prepared in Figma into a dynamic, interactive React.js site.

CERTIFICATES

AI & Data Science: Machine Learning Applications with Python, Introduction to Deep Learning, Introduction to Artificial Intelligence, Machine Learning — BTK Akademi

Systems & Game Development: Introduction to Operating Systems, Introduction to Game Development with Unity — BTK Akademi

Web & Software Development: Web Development with HTML5, CSS Fundamentals — BTK Akademi

PUBLICATIONS

Fake News Detection with the Tf-Idf Vector Model and Artificial Intelligence Techniques

Tf-Idf Vektör Modeli ve Yapay Zekâ Teknikleriyle Sahte Haber Tespiti

Karcıoğlu, A. A., Kara, Ş., & Yalçınkaya, M. — Conference paper, ICADA — 14/03/2024

- To fight misinformation, built a machine-learning classifier using text mining and preprocessing techniques on the ISOT dataset.
- Of four algorithms tested with 5-fold cross-validation and a 70/30 split, the Decision Tree model reached 99.24% accuracy.
